### **DETAILED ACTION**

This Office Action is in response to a communication made on October 31, 2005.

Claims 1-39 are pending in this application.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31 and 36, drawn to a system for messaging between a server and a client using a plurality of protocol gateways, classified in class 709, subclass 203.
- II. Claims 32-35, drawn to forwarding a message through a message router, classified in class 709, subclass 238.
- III. Claims 37 and 38, drawn to authenticating users at a router, classified in class 709, subclass 225.
- IV. Claim 39, drawn to alerting users through wireless gateways, classified in class 709, subclass 224.

Inventions I, II, III, and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as receiving any type of message from a client that has a message key and forwarding to a selected server. Also invention III has a separate utility because its steered to any sort of message router responsible for authenticating a client. Finally,

invention IV has a separate utility because it just discloses a separate utility that creates alerts for users in a wireless system. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
